

Prestige Carpet Cleaning & Floor Care

Spot Release Instructions

1. Respond to Spots and Stains as quickly as possible. The more time that passes between a spot's occurrence and its removal, the more likely it will become permanent.
2. First remove all solid particles with a spoon or by hand.
3. **Blot** any remaining liquid from the original spot with a clean white cotton towel or white paper towel. Do NOT rub with a towel as this can cause fraying of the carpet fibers (a condition which cannot be corrected)
4. Use a few drops of Spot Out beginning at the outer most part of the spot and work to the center. A spot 5 inches in diameter should only require 4-5 drops. Work this into the carpet using a stiff bristle vegetable brush or even a hair brush, work the Spot Out through the fibers involved in the spot, beginning from the outermost part of the spot working to the center.
5. Rinse the Spot Out with VERY Hot water, doesn't have to be boiling, but hotter than you'd typically be with for your bath or shower.
6. Blot with another clean white cotton towel or paper towel.
7. If spot remains repeat procedure.
8. If spot remains after repeating, give us a call and we'll advise further steps.
